

EDITORIAL

Current economic research has been struggling to find market solutions for several aspects of sustainable economic growth: employment and consumption volatility, health care spending, household debt, stability of financial markets, as well as competition and entrepreneurship. It appears that more research is needed in these domains, and that variety of methods shall be considered before jumping into any conclusions.

We are very proud to deliver the special issue of *Ekonomické rozhledy* / *The Economic Review* that is devoted to research in sustainable economic growth and spectrum of methods that scholarly work might employ to solve selected related macro- and micro-issues. From the discussion over proper method selection in terms of flexible regression modelling through time series analysis of volatile financial markets and particularly a hot-button issue of volatile cryptocurrency (namely bitcoin) as well as data envelopment analysis and structural decomposition analysis towards cluster analysis and matrix games, the compilation of works marks its big finish with a focus group study on entrepreneurship. Thus, our special issue provides rather diverse yet unique portfolio of research methods that might help a reader to illuminate the pathways between method selection and suggested conclusions regarding selected aspect of sustainable economic growth.

Our special issue is unique also from another point of view. In this special issue, we decided to give more space to early career researchers who we believe might provide some innovative insights into research questions surrounding the concept of economic growth and whose fresh ideas, in our perspective, are potent to expand the knowledge base of economic research in the future. We thank to all authors for providing us opportunity to publish results of their research and release a special issue of *Ekonomické rozhledy* / *The Economic Review* offering an interesting and diversified palette of solutions on sustainable economic growth.

We hope you will find these papers encouraging for your next research endeavours, and wish you an enjoyable reading.
